

71% of all cyber-attacks are financially motivated. In 2020, cybercriminals exposed an estimated average of 350,000 sensitive files for every attack. The majority of U.S consumers don't believe that businesses have the ability to secure their financial information. We can understand why considering that a new online threat is launched every 39 seconds around the world. Cybercrime is a big deal in the financial industry as it results in a loss of \$2.9 million dollars every single minute. Most companies that fall victim to a major data leak will not be able to continue business due to lack of money, and loss of current clients.

CYBERSECURITY CHALLENGES

- Excessive SPAM
- Malware, Ransomware, and Viruses
- Phishing and Spoofing Attacks
- Insider Threats / Employee error
- Securing sensitive information

The cyber security risks are increasing to an alarming level with much concern causing business leaders worldwide to spend a whopping \$133 billion dollars to protect their organizations by 2022. (Gartner) The methods of hacking in regards to data leaks have varied for financial service companies with the majority involving weak passwords, malware from email-borne attacks, phishing and social engineering, and account takeovers from users on Office 365. The unauthorized access due to internal security flaws cause inevitable data leaks and compromise for small business which could mean disaster.

TOP SOLUTIONS FOR FINANCE

We protect your financial company from excessive spam, viruses, and phishing attacks using **ExchangeDefender PRO**, our advanced multilayered security suite. We secure sensitive information by enabling our **Corporate Email Encryption** which offers military grade security and prevents data leaks. U.S. Businesses must adhere to regulatory data compliance, and often rely on ExchangeDefender for long term storage with **Archiving and Compliance**. This service ensures compliance with tamper-proof email archiving and unlimited storage. Our **Web File Server** protects your business from cloud application threats, as it enables your team members to upload, manage, and share large files and documents securely. The service is encrypted, and provides real-time reporting of all activity for accountability and transparency. **Security tip:** To increase your organization's resistance against cyber-threats, start with powerful email security, add web security and data protection, and to ensure that you always have access to email even during service disruptions, our email outage protection.
